Environmental policy

Our business and the environment

Rope Access Sverige AB works in many different industries and we are keen on to take responsibility for the environment, regardless of what work we do.

Rope access as a working method is often a big environmental gain, as cranes, scaffolds and lifts can be avoided. This reduces transport needs, among other things.

The environmental impact that may arise in our assignments varies. This may be choice of chemicals, spills in connection with use, etc. Other environmental impacts apply to our office operations, as well as our choice of transport solution.

Our ambition

Through continuous improvements in our environmental work as well as to work preventive, we take responsibility for environmentally societal development. Environmental work covers our entire business and is adapted to the conditions in the places where we perform our assignments. Environmental work shall be conducted integrated into the business. By having a good knowledge of how environmental issues affect our customers and suppliers, we can increase the added value of our services, thus strengthening our competitiveness.

We do this by:

- Strengthen all employees' knowledge and commitment to environmental work
- Positive and professional handling of our customers and suppliers' questions and requirements regarding the environment
- Collaborate with suppliers who meet our communicated environmental requirements
- Continually look for and develop new methods that have as little environmental impact as possible
- Conserve energy and materials in our own work
- Sort and reuse cardboard, corrugated cardboard, plastic packaging and office paper
- Observe relevant laws and other requirements
- Choose as far as possible transport solutions with as little environmental impact as possible
- Work with goals, action plans and follow-up of environmental work
- Openly present our environmental work
